Summary

Adjusted holes for Full Bear mod and using the BTT SKR Mini E3 v3 board. E-leton did all the heavy lifting.

As mentioned, this is a remix of E-Leton's work. I only adjusted the screw holes to better align with the BTT SKR Mini E3 v3 board holes. I also made small adjustments so the board would lay flat and some plugs were less obscured. I may revert those changes if they prove to be unhelpful.

UPDATE: Changed the file because one of my changes was unhelpful. New upload should work.

UPDATE 2: The original design works but it doesn't leave much room on the sides for the Hotbed or Extruder connections. Added an additional 10mm to both the case and the door.

UPDATE 3: Added requested parts. I did not model these as they are standard parts in the MK3S print files.

This remix is based on

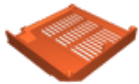

Prusa Bear SKR MINI E3 V3 Case
